December 1, 1949

To the Stockholders of  
Geo. A. Hormel & Company:

The earnings statement and balance sheet of your Company for the year ended October 29, 1949, is submitted herewith.

Stockholders' investment amounts to \$22,182,166. The Company has a long term obligation of \$6,000,000, payable serially over a period of seven years. Otherwise, there was no borrowed money nor other indebtedness at the year end beyond current and customary bills. The net quick assets (working capital) amount to \$13,393,920.

During the year the prices of meat and livestock have declined drastically. As has been its custom in the past, the Company continues to price its inventory at the lower of cost or market. Hence, in spite of following a policy of keeping inventories at a minimum, this year has brought us substantial inventory losses. Falling prices, and in certain departments narrower margins because of the anticipation of them, together with unusually high operating costs in certain plants and departments which were under construction, expansion, or rearrangement and modernization during the year, combined to reduce the net earnings from \$3,692,677 or \$7.22 per share of common last year, to \$1,650,023 or \$3.23 per share of common this year. (The above figures on earnings per share are on the basis of the total of shares which became outstanding upon the reclassification of the common stock in January, 1949. At that time, each share of no par common stock was reclassified into one and one-tenth shares of \$15 par value common stock.)

In tonnage, total sales of products for the year amounted to 737,925,826 pounds, which is an increase of 6 per cent over last year.

In dollars, net sales amounted to \$242,060,922, which is 8.8 per cent less than last year, reflecting the lower prices prevailing.

The construction, expansion, and rearrangement referred to include a number of important improvements in the Company's facility for doing business.

Certain major rearrangements in the Austin plant have provided more capacity and increased efficiency in our manufacturing departments. An expansion in our plants at Mitchell, South Dakota, and Dallas, Houston, and San Antonio, Texas has been completed, and expansion in our plant at Seattle, Washington has begun. Construction of our new plant at Fremont, Nebraska has been substantially completed, and construction of a new plant at San Francisco has been started to replace our present branch which we had under lease at a satisfactory rental with several years to run, but which the construction of a super highway through the premises has forced us to abandon.

Certain canning facilities were moved from Austin to Paynesville, Minnesota. Others were moved from Houston, Texas to Owatonna, Minnesota. Both have been materially enlarged. Both have been located in plants of suppliers of important raw materials in the canning operations involved, effecting substantial savings in handling costs, and providing year-round use of facilities in two complementary seasonal businesses—a mutually advantageous arrangement, which applies to both manufacturing and warehousing, and which gives us materially increased capacity without corresponding capital investment.

As pointed out in our statement a year ago, the plant facilities we had in use then were substantially those which had been provided by plowing back the earnings of the Company during the twenty years prior to 1941. During those twenty years, the average profit amounted to 2.82 cents per dollar of sales. That is double the rate of profit that we enjoyed even a year ago (1.42 cents) when our earnings were well ahead of the industry average. It is four times the 0.72 cents per dollar of sales which we were able to earn this year.

As we learn to do that additional processing which adds more value to the farmers' livestock and gives the consumer more uniformity, economy and convenience, a considerable expansion in plant and working capital is required. As we learn new and better and more economical methods, the costs of obsolescence and replacements become substantial.

To pay the cost of facilities recently acquired, and to provide the additional working capital needed for the operation of those facilities, we have not been able to depend on earnings plowed back into the business. Instead, to reimburse the Company's treasury for those increased capital investments, your Board of Directors found it expedient to borrow a substantial amount of money on a long term basis.

On September 1, 1949, the Company borrowed from two of its principal banks, \$6,000,000. This loan is on the Company's unsecured promissory notes, payable serially over a period of seven years; \$600,000 on September 1, 1950, and \$900,000 on each September 1st for the next six years. Inasmuch as it is money due within a year, the \$600,000 for 1950 is shown in our current liabilities. The balance of \$5,400,000 appears as a new item under the heading "Long Term Debt". This long term loan has materially increased our working capital.

With our expansion program completed, and with substantially all of our improved processing facilities in operation, your Company is in position to accept the increased numbers of livestock as they become available and to fully process the meats and by-products which they yield.

H. H. COREY  
President

## ACCOUNTANTS' REPORT

---

To the Board of Directors  
Geo. A. Hormel & Company  
Austin, Minnesota

We have examined the balance sheet of Geo. A. Hormel & Company as of October 29, 1949, and the related statements of profit and loss and earnings reinvested in the business for the fiscal year then ended. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the accompanying balance sheet and statements of profit and loss and earnings reinvested in the business present fairly the financial position of Geo. A. Hormel & Company at October 29, 1949, and the results of its operations for the fiscal year then ended, in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year.
